We offer a variety of services to help you, your loved one or your facility. Please review the services we offer. We can help change lives. Sign up for services online or contact us today to discuss your specific needs.

The Ability to Communicate is our Most Human Characteristic.

Speaking, understanding, and hearing are essential skills in our society. One out of ten Americans has been diagnosed with a speech or hearing disorder. These individuals encounter many educational, social, psychological, emotional and vocational issues.

Educational Consultants Group specializes in providing comprehensive Medical Speech Language Pathology services to Adults who are experiencing problems with speaking, comprehending and/or have difficulties eating.

We provide services for a variety of Adult Communication Disorders:

Aphasia -A language disorder due to brain damage or disease resulting in difficulty in formulating, expressing, and/or understanding language.

Apraxia - A speech programming disorder which makes words and sentences sound jumbled or meaningless.

Dysarthria - A group of speech disorders resulting from paralysis, weakness, or lack of coordination of the muscles required for speech.

Dysphagia -Swallowing and chewing problem are common with all of the above

Articulation disorders - In adults, articulation can become impaired as a result of neurological damage such as from a stroke or head injury and is termed a **motor speech disorder**.

Voice disorders include hoarseness, inappropriate pitch, loudness, quality or total loss of voice. Voice problems may result from damage to the vocal cords because of surgery, disease or yelling (vocal abuse), or from such common conditions as LPR, GERD or Parkinson's.

Cognitive Communication disorder - is a term used to describe a wide range of specific communication problems that can result from damage to regions of the brain that control your ability to think (cognition). This damage can impair your ability to transform thoughts into meaningful speech, writing or gestures.

Oral Motor disorders – Include orofacial pain, oral-motor dysfunction, and temporomandibular disorders (TMD) which impact speech and/or swallowing. Often patients complain of oral fatigue, pain or discomfort during talking and/or eating. Their problems are characterized by pain typically located in the muscles of mastication or the temporomandibular joint.

Treating for Communication and Swallowing Disorders

Each patient's therapy is based on the type and severity of the disorder. At Educational Consultants Group we offer traditional medical speech-language pathology services in conjunction with alternative treatments for effective results.

Treatment services include Speech, Voice, and Swallowing Therapy provided in conjunction with Surface Biofeedback (SEMG), Neuromuscular Stimulation, Myofascial Release and relaxation training.

Our goal is to improve patients' quality of life and reduce any negative effects communication and swallowing problems can have on an individual's social functioning, emotional health, and energy level. If you have any questions regarding our services please call and discuss your concerns.
